

### **Meeting Minutes (September 21<sup>st</sup>):**

- We read the lab document and identified the following tasks:
  - Scraping Reddit posts using API
  - Cleaning (removing tags, special characters, irrelevant info..)
  - Data Transformation (converting timestamps, masking names, extracting key words)
  - Extracting text from Images (using pytesseract)
  - Storing cleaned data in MySQL database
- We divided the tasks amongst ourselves:
  - Nikki: Scraping reddit posts and performing cleaning.
  - Haoyue: Data transformation and keywords extraction.
  - Anood: Storing to MySQL and creating Reddit developer account.
