Meeting Minutes (September 7th):

- We worked on installing the required libraries, we faced challenges with installing "yfinance" locally.
- Haoyue created a GitHub repository with different python files and functions for collaboration.
- We divided tasks:
  - Haoyue: Fetch data from API and save as CSV file, using default user portfolio (which includes tickers and dates)
  - Nikki: Pre-preprocessing the extracted CSV file (Task 3)
  - Anood: Interaction with mysql and phpmyadmin (storing CSV file into mysql and visualizing it in phpmyadmin)
